What Is Claimed Is:

1.   A device diagnosis system, comprising:

a database server for acquiring and centrally managing diagnostic

data on a plurality of devices to which different types of diagnostic

software are applied;

a diagnosis execution unit for executing said diagnostic software

according to said diagnostic data; and

a human-machine interface for communicating with said database

server and said diagnosis execution unit.

2.   The device diagnosis system of claim 1, wherein a common

interface is provided for the programs of said diagnostic software in

said diagnosis execution unit.

3.   The device diagnosis system of claim 1 or 2, wherein the work

area of said diagnostic software is formed within said database server.

4.   The device diagnosis system of claim 1, 2 or 3, wherein said

database server acquires diagnostic data from devices under diagnosis

through an external tool and by means of direct input by a user.

5.   The device diagnosis system of claim 1, 2, 3 or 4, wherein said

human-machine interface comprises diagnostic navigators for monitoring

said diagnostic software and a diagnostic tool started from any of said

diagnostic navigators to provide screens necessary for diagnosis.

6.   The device diagnosis system of claim 1, 2, 3, 4 or 5, wherein

said diagnostic tool comprises a diagnosis control unit for providing

setup screens specific to respective types of said diagnostic software

and a common control unit for providing screens common to all types

of said diagnostic software.

7.   The device diagnosis system of claim 1, 2, 3, 4, 5 or 6, wherein

said diagnosis execution unit is connected to an external network.
